Problem Statement

Students, faculty, and staff are not properly informed about the operational status of water fountains on the University of South Carolina campus.

What Is The Problem?

Water fountains frequently don't work or only provide warm/hot water; Students who need to refill their water bottles or get water after a long walk to class are mostly unaware of which water fountains work properly.

Where Does This Problem Occur?

Anywhere on the UofSC campus that has a public water fountain.

Who Has This Problem?

Students, faculty, and staff belonging to the University of South Carolina.

Why Does It Matter?

Staying hydrated is extremely important, especially in the hot and humid months in South Carolina. Drinking cool water makes uphill treks and sweaty walks easier.
